

AutoBlend Inlet Check Valve P/N 21-811008

All AutoBlend Oil Injection Systems

The umbrella style inlet check valves for all AutoBlend units are available by ordering P/N 21-811008. A package contains two check valve assemblies (umbrella valve and seat) and one rubber gasket. One kit is required to service both inlet check valves installed in the AutoBlend unit.

The leak test for the inlet check valves is in section 8 of the 45/50 (4 cyl.) and 50/60/70 (3 cyl.) service manual, P/N 90-86135--5. Replacement of the inlet check valves is not always necessary. Cleaning the check valve may be all that is required for proper operation.
